## ORSON COFFEE TABLE

Meet the Orson, your new favorite coffee table.

A sanctuary for your coffee cup, it also serves as a laptop workspace, the hub of a brainstorming session, or additional seating in a pinch. Each slab of highly-engineered composite concrete is sealed with a material that will not peel or yellow. The steel base is cut, fitted and welded by hand with the utmost care. The base is finished with a wax treatment that fosters a natural patina over time, or optional powder coat.

### MATERIALS & SPECS

composite concrete slab // steel base, powder coat optional

65 x 18 x 16 // 170 lb // 77 kg

*shown in limestone & raw steel*

No. 002

## MODERN MUSKOKA CHAIR

The Modern Muskoka is a contemporary reinterpretation of the original Adirondack chair, introduced in 1903. With an emphasis on ergonomics, clean lines, and honest materials, this chair is comprised of natural, non-biodegradable materials that will age and patina with time. The shell is hand-cast in a highly-engineered composite concrete that yields a durable, strong and thin result. The steel base is cut, fitted and welded by hand, one chair at a time. Once finished, it receives a protective wax finish.

The Muskoka incorporates thoughtful design details: a removable base, seat drainage via a cast-in copper drain aperture, and a composition based on the least number of strokes possible.

### MATERIALS & SPECS

composite concrete // steel base, powder coat optional

20.5 x 15 x 11 // 130 lb // 59 kg

*shown in limestone & raw steel with optional ottoman*

## MODERN MUSKOKA OTTOMAN

Kick up your feet with the Muskoka Ottoman. Visually, the ottoman recalls the look and feel of the chair that inspired it, with its complimentary angles and honest materials.

Functionally, the dimensional considerations provide the user elegant comfort without being obtrusive when sitting or standing. The Muskoka ottoman's height and width allow it to nestle within the framework of the chair: it's narrower than the chair body, allowing the user to plant both feet firmly on each side when sitting and standing, and it's shorter than the base of the seat, allowing it to tuck neatly below the edge. This simple design consideration allows to you maximize comfort without becoming a hazard when sitting or standing.

### MATERIALS & SPECS

composite concrete // steel base, powder coat optional

20.5 x 15 x 11 // 27 lb // 12 kg

*shown in limestone & raw steel*

## INCLINARE BENCH

Sometimes you have to look to the past to see the future, and such is the case with the Inclinare Bench. Its genealogy is rooted in the clean lines of mid-century modern classics, but it was created in 2012. It provides a comfortable seating area for one to two people; use it around your Triangulum fire pit or on the patio, with a Knotty Stool or pair of Muskoka Chairs. Designed with the same ergonomic considerations of the Modern Muskoka Chair, each Inclinare Bench is hand-cast in a highly engineered concrete, making it extremely durable, strong, and thin. The steel rod base is handmade to fit each individual bench shell. Considerate design details include a removable base, and proper drainage to a cast-in copper drain aperture.

### MATERIALS & SPECS

composite concrete slab // steel base, powder coat optional

61.5 x 23.5 x 36.25 // 215 lb // 97 kg

*shown in limestone & special edition safety yellow powder coat*

## KNOTTY STOOL

---

The Knotty Stool is the perfect addition to any space. A natural pedestal or modern accompaniment, it stands beautifully alone, or can be used as seating, a footrest, or an impromptu table. The smooth, organic surface of cast-concrete offers a wabi-sabi vibe. Hollow-cast, the Knotty Stool can be made with optional sliders for indoor use.

## TRIANGULUM FIRE PIT

The Triangulum is a simple and refined approach to the art of fire. Made of a durable composite concrete, it elevates the fire 10" off of the ground, giving the flames a platform without impeding a conversation with someone directly across, a drawback of chimineas or other tall designs. The shape encourages conversation; it draws people in and encircles them, interaction by design. Vertical slots allow water to drain and allow air into the underside of the fire, feeding the flames with much needed oxygen.

### MATERIALS & SPECS

composite concrete

36 x 36 x 12 // 215 lb // 98 kg

*shown in natural grey*

6" fire ring, pre-plumbed for natural gas or propane.

Natural gas or propane only. Not recommended for wood burning.
