No. 010

TRIANGULUM FIRE PIT

The Triangulum is a simple and refined approach to the art of fire. Made of a durable composite concrete, it elevates the fire 10" off of the ground, giving the flames a platform without impeding a conversation with someone directly across, a drawback of chimineas or other tall designs. The shape encourages conversation; it draws people in and encircles them, interaction by design. Vertical slots allow water to drain and allow air into the underside of the fire, feeding the flames with much needed oxygen.

MATERIALS & SPECS

composite concrete

36 x 36 x 12 // 215 lb // 98 kg

shown in natural grey

6" fire ring, pre-plumbed for natural gas or propane.

Natural gas or propane only. Not recommended for wood burning.
